REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: The claims describe a cutting apparatus that has gripper beams wherein one gripper beam grips a web and pulls the web along the frame of the apparatus, then transversely cuts the web with a cutting unit. While one gripper beam is pulling the web to be cut, the other cutter beam is on its return stroke to move the gripper adjacent to the cutter in order to grip the web after it is cut. The gripper beams can travel over one another by telescopically extending a piece of the gripper beam to engage a tower, which elevates the gripper beam above the return stroke gripper beam. After the web is cut, the gripper beam is lowered into a slide, and the extended piece of the gripper beam is retracted out of the tower for its return stroke.

Asselborn et al (3,819,073) teach an apparatus that has grippers that travel along the length of a frame in order to feed a workpiece by shuttling the grippers between an endpoint of the frame and the midpoint of the frame, but do not teach gripper beams that can travel over one another, and do not teach a telescopically extended extension piece that engages and disengages an elevating tower. Schoenbeck et al (6,092,709) teach an apparatus that has grippers that travel along the length of a frame in order to feed a workpiece by alternating gripping and non-gripping grippers during feed and return stroke phases while the grippers pass by one another, but do not teach gripper beams that can travel over one another and do not teach a telescopically extendable extension piece that engages and disengages an elevating tower. It would not have been obvious to combine the references with other prior art teachings in order to meet the claim limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
